This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

ADDITIONS AND CORRECTIONS.

ADDITIONAL DESCRIPTIONS AND CLAIMS.

I.—AGRICULTURE.

No. 18,604.—PHILIP C. ROWE, of Boston, Mass.—*Improvement in Mode of Protecting Trees from Canker Worms, &c.*—Patent dated November 10, 1857.—The claim and engravings explain the nature of this invention.

Claim.—The inventor says: I am aware that for such purposes an encircling plate or roof has been applied around the trunk of a tree; also, that cotton batting or loose fibrous material has been wound around and fixed to the body of a tree; consequently, I do not claim such means of preventing the ascent of canker worms.

But I claim my improved tree protector, made as described, viz., with the encircling roof or cover of metal or other suitable material, and one or more circular or surrounding fringes suspended from the said roof and around the tree, substantially as described.

V.—CALORIFICS.

No. 18,883.—GEORGE GRIGGS, of Roxbury, Mass., assignor to himself and WILLIAM A. BULLARD, of Dedham, Mass.—*Improvement in Locomotive Furnaces.*—Patent dated December 15, 1857.—The claim and engravings explain the nature of this invention.

The inventor says: I do not claim placing a hollow or water space fire bridge within a locomotive or other furnace; as such bridge, in whatever position or under whatever arrangement it may be used, will not accomplish the end which I have in view.

Neither do I claim the use of fire bridges of fire-brick, either with or without perforations, except when such bridges are arranged substantially as set forth.

But I *claim* the described arrangement of a fire-brick arch or shelf attached to the rear of a furnace, and extending horizontally or nearly so beneath and in front of the tube sheet, and over the fire towards the fire door, in such a manner as to form a combustion chamber immediately in front of the tube sheet, in which the smoke and gases, after passing over the heated surface of the bridge, are consumed, as set forth.

No. 17,085.—GEORGE GILMOUR, of Chelsea, Mass.—*Improvement in Messenger Shackle Blocks.*—Patent dated April 21, 1857.—In applying this shackle block to a cable chain under water, the roller B is first removed from the parts *c* by withdrawing bolt E so as to enable the chain to enter the passage D ; the roller B is then restored to its place, and the block is lowered down on the chain, the pressure of the chain against pawl *b* causing said pawl not only to slip freely on it, but to raise parts *c* so as to facilitate the passage of the block on the chain. As soon as the block has attained the required depth, the purchase rope may be operated so as to raise the block, causing pawl *b* to so pass between the links of the chain and rest against the roller B as to firmly clutch the block to the chain.

Claim.—The said messenger shackle block, or combination and arrangement of the sheaves or pulleys, the forked pawl, the rollers, and the chain space or passage, substantially as specified.

Also, hinging or jointing the parts *c c* and the pawl to the remainder of the frame, in order that the roller and pawl may be turned towards the sheaves of the pulley, as specified.

IX.—LAND CONVEYANCE.

No. 16,696.—JOHN SEELY, of Buffalo, N. Y.—*Improvement in Floating Sectional Dry Docks.*—Patent dated February 24, 1857.—As the water is discharged, the dock would be liable to sway to and fro, and rise unlevel. This is to be prevented by the use of the braces K, which turn upon centres which are in line with the centres of the tubular hinges *a a b.*

The inventor says: I do not intend to be limited to the particular dimensions given of the several parts of my improvements, as these dimensions and proportions may be varied as circumstances may demand. I do not intend to be limited to the use of a dip wheel for discharging the water from the docks, when circumstances shall render it more favorable to use pumps for the same purpose.

I do not claim the several parts described except the tubular hinges, when used independent of the several combinations described.

First. I *claim* the combination of the conducting pipe *e c d* with the tubular hinges *a a b*, and sectional dock D, substantially as set forth.

Second. I claim the combination of the parallel braces K K turning upon joints *t t*, with the floating docks D D and the wheel pit W, for the purposes set forth.

XXI.—WEARING APPAREL.

No. 17,573.—HORACE HARRIS, of Newark, N. J.—*Improvement in Safety Pockets.*—Patent dated June 16 1857.—The chains *h* are secured within the lining of the garment, and are for the purpose of

preventing the pocket from being cut out. The pocket can be opened by pulling chain F, which will withdraw clasp I from wire *c*; and the pocket is shut by the simple pressure on it, which will bring wire *c* within clasp D, the spring E serving to press said clasp on the two wires which constitute the mouth frame of the pocket.

The inventor says: I am aware that Joseph Patton has a patent for "spring bolt and catch" for fastening "plates" connected with pockets. I do not use or claim any of his devices.

I *claim* wire frame with the spring *c* for throwing it open, constructed in the manner described.

XXII.—MISCELLANEOUS.

No. 17,179.—JOHN A. WINSLOW, of Roxbury, Mass.—*Improvement in Skates.*—Patent dated April 28, 1857.—The nature of this invention will be understood by reference to the claim and engraving.

Claim.—The application of a second metal runner to the skate, which being placed on the bottom, outside of the central line of axis, and the runner in the ordinary skate, which lies along that line, removed to a correspondent position on the other side, completes the improvement.
